Where Innovation and Quality Meet

Lekem of Indiana, Inc., **ONLY** focuses on Electroless Nickel chemistry and equipment. We can save you money, increase production and reduce your waste costs.

Starting with equipment we can design a whole turn key system or update your existing line. This design will drastically speed up your transferring times, increase profits and ensure safety.

The next step is LeKem's Electroless Nickel chemistry which has over a quarter century of success behind it. Our products will increase production, plating rates, and quality.

The last step is with our EN Terminator. This product can get your Nickel PPMs down below five and can be waste treated or hauled away as rinse water. In most cases it only takes a couple of hours to get the bath to a clear state.

**We typically save our customers up to 30%
with our EN chemistries and equipment designs.**

**Please contact LeKem, Inc. for more info
and start saving money and taking control
of your EN plating line!**
